Apoll is polling script and it is licensed under **General Public License**. You can use it for free and modify for your needs. All I ask is for you to leave the link to my site in the results page.

This script allows you to create polls on your website in minutes. It is for any type of websites. It provides a nice admin panel, easy create poll, archive old polls, easily archive poll and active new one, more than one user can use admin panel, have skins and languages support.

Features:

- Create easily your own polls as many as you want
- Active and archive poll in second
- Create more then one user
- Users can change, add, delete polls, change settings, change theme, change languages, etc
- Easily modify theme

Questions and Examples

1. How to install apoll?

To install apoll first you need to upload folder apoll on your server. Change **chmod 777** to **global_config.php** and to **/cache/admin/** and **/cache/public/** folders. Run **/apoll/install/** to install script. Fill up fields for mysql database and administrator and click install. If all informations was correct you will gate message like: *"You successfully install apoll, please delete folder install. Than you can login into admin panel "*. Your installation is finished and you can login into admin panel after deleting folder install.

2. How to add/delete/change poll?

First login into your apoll admin panel, (**/apoll/admin/**) and login with username & password you created in installation. Click in top menu on **"Polls"**. Now you have information about your polls. To add poll click on right menu **"Add poll"**. To change poll click on edit in poll list. To delete click on delete in poll list. [Note: to delete poll you need first to deactivate it].

3. How to add/edit/delete users?

Go to admin panel and click in top menu on **"Users"**. To add user click in right menu **"Add user"**. To change, delete user click on icons in users list.

4. How to change settings?

Go to admin panel and click in top menu on **"Options"**. To change settings just click on **Edit**.

5. How to modify theme?

Apoll is using smarty for templates. All templates are under folder **themes**. In **admin** folder are templates for admin panel and in **public** folder are templates results and votes.

6. How to include poll on web site?

When finish add poll, you will get code for that poll. If you have static pages aka html you need to change your extension in **.php**.

7. Can I help somehow?

Well if you found this script helpful you may consider about make some **donation**. I can accept donation through <http://www.moneybookers.com>. Also you can help with creating admin or public template or translating apoll in your language.
